Feeds up to 5X more than other leading brands

Preferred by Professional Growers

About Nature's Source

Nature's Source® has been manufacturing high efficiency plant food products for horticultural professionals, specialty ag and home gardeners since 1994. Ball DPF, LLC is a Ball Horticultural Co. company. Nature's Source products are manufactured in the USA (Sherman, Texas) by Ball DPF, LLC. All Nature's Source plant food formulations include oilseed extract, an all-natural and renewable source of plant nutrition. Whether you're a professional grower or gardening at home, Nature's Source's easy-to-use liquid plant foods and plant probiotic help you grow plants in harmony with nature.

Commitment to Sustainability

From its plant in Texas, which is certified by the town of Sherman as a zero waste discharge manufacturing facility, Ball DPF, LLC makes a variety of Nature's Source brand plant food formulations. And we do this sustainably.

All Nature's Source plant foods are based on oilseed extract, which is a natural product. The oilseed extract Ball DPF receives is a by-product from manufacturers that mill seeds to extract food and feed ingredients.

During the proprietary manufacturing process, Ball DPF also finds valuable uses for the waste it creates. Filter sludge, which results from plant food manufacturing, is pressed to remove as much liquid phase as possible. The extracted liquid is re-sold as a registered 1-1-1 plant food product in the state of Texas. Material is then offered to local growers and cattlemen as livestock feed. Ball DPF delivers semi-solid filter cake ranging 16-22% in protein, which is a vital feed supplement for livestock.

NATURE'S SOURCE®

Plant Foods

include Natural Oilseed Extract plant nutrition

Soil Enhancer

A complex of beneficial microorganisms

Working together to grow bountiful plants and a living soil.

NATURE'S SOURCE®

Your source for BioNutrition™

The oilseed extract contained in Nature's Source plant foods contain N-P-K, trace elements and 20 naturally occurring amino acids. The requirement of amino acids in essential quantities is well known as a means to increase yield/blooms and overall crop quality.

Although Nature's Source is 10% nitrogen, it is twice the weight. Therefore, one container of Nature's Source will yield the same amount of nitrogen when compared to one bag of water-soluble 20% nitrogen fertilizer.

A study by Holden Research and Consulting compared full-rate treatments of Nature's Source Organic Plant Food 3-1-1 foliar applications and Nature's Source Professional 10-4-3 in the soil with half nitrogen, to the grower standard of 175 lbs. of total nitrogen per acre with half-rate Nature's Source, and resulted in 60% greater net return dollars due to the 45% greater yield.

"The BEST liquid organic fertilizer"*

Organic Plant Food 3-1-1

GMO-Free • Pathogen-Free

Plant Biotik™

BENEFITS OF NATURE'S SOURCE PLANT PROBIOTIC / PLANT BIOTIK™

- Overall healthier plants—strengthens plants' natural immunity
- Aids in nutrient breakdown, availability and absorption; reduces nutrient leaching
- Improves soil structure
- Promotes faster, stronger rooting
- Reduces planting/transplant shock (better plant establishment)
- Easy to use and environmentally beneficial
- Increases resistance to environmental stress
