

THE SMART SULFUR™ SOURCE

SO4
PELLETIZED GYPSUM

SO4 is the smart sulfur source for season-long, yield-maximizing plant growth.

SO4 Application

SMART SULFUR

With superior solubility, SO4 delivers sulfur and calcium when the plant needs it throughout the growing season. Ammonium sulfate (AMS) is 300x more soluble than SO4, releasing sulfur too quickly, and elemental sulfur releases sulfur too slowly, neither meeting the crop's full needs.

PH NEUTRAL

SO4 is pH neutral, which means it will not acidify the soil like other sulfur sources. Proper soil pH maximizes a plant's utilization of nutrients promoting good plant health and optimizing yield.

APPLICATION FLEXIBILITY

SO4's consistent pellet size allows it to be blended and applied with other dry fertilizers and makes it the smart choice for any application scenario.

CORRECT AND MAINTAIN SOIL PH

98G is the most efficient and consistent product to correct and maintain soil pH.

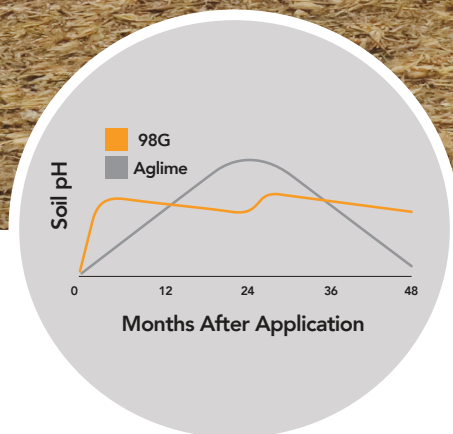

98G Application

IMPROVES NUTRIENT AVAILABILITY

Soil pH is the foundation for nutrient availability. 98G increases and stabilizes soil pH levels, maximizing your investment in crop nutrients by making them more readily available to the crop.

CONSISTENTLY MAXIMIZES YIELD

Research shows that soil pH below 6.0 reduces crop yield by as much as 30 percent. 98G corrects soil pH faster than aglime, and maintenance application rates deliver consistent, yield-maximizing soil pH rates over time.

Aglime Application

PRECISE PLACEMENT

98G results in precise placement from flat-rate or variable rate applications and won't blow away in the wind like aglime. It solubilizes quickly to effectively change soil pH and can be applied in the spring or fall.
