

NATURAL WET®

Wetting Agent

Natural Wet is a wetting agent designed to facilitate water absorption in dry areas. When utilized as a foliar spray application, it enables product and micronutrient applications to spread and stick to plant surfaces for better absorption.

Natural Wet's principle ingredients are saponin glycosides, otherwise known as saponins, derived from yucca plant extracts. Yucca plants produce the saponins as a means of aiding their survival during extreme weather conditions as saponins facilitate water penetration and nitrogen utilization. With thanks to these saponins, **Natural Wet** helps plants regulate water usage and increase their resilience during times of heat and moisture stress.

Natural Wet is a non-phytotoxic wetting agent listed by the Organic Materials Review Institute and approved by the Washington State Organic Food Program for use in organic production.

Product Profile

Form: Liquid

Function: Wetting agent derived from yucca plant extracts

Compatibility: Compatible with most products

Shelf Life: Cool, shaded areas, up to 3 years

Advantages:

- 100% Biodegradable

Key Features

- Reduces surface tension of liquids
- Helps reduce stress caused by drought
- Increases water uptake
- Suitable for organic production
- Increases water penetration into the soil
- Improves drainage and reduces salinity

Without **Natural Wet** the spray pattern and droplets are non-uniform and spread apart.

With **Natural Wet** the spray pattern and droplets are more uniform and diffused creating a sheeting effect when sprayed.
