

Time to use
new LifeGard®
fungicide
to prevent:

- Early blight
- Late blight
- White mold

LifeGard WG:
The first
biological
activator.
It triggers
a plant's
immunity
to disease.

LifeGard® is a broad-spectrum fungicide that works great on early blight, late blight and white mold. Apply it to prime your potato crop to be ready and resistant against disease. LifeGard fits your resistance management program. It is a FRAC P6 product, the only fungicide in this category. Economical, LifeGard covers a

lot of acres at the low rate of 1 ounce per acre and there are no jugs to rinse, either.

Make LifeGard part of your potato disease control program this year. Contact your chemical dealer today to apply LifeGard fungicide in your next rotation—right now.
